

## RSUW Newsletter

Welcome to the new Regional Seismic Users group website

This site is under development, and any ideas, suggestions are welcome

It aims to provide a place where users can "meet" each other, and exchange, thoughts, ideas etc, to improve or use of the powerful tool at our disposal, made possible to a great extent through the benevolence of Paul Harris and others at the Aust Centre for Geomechanics in Perth, WA

It aims to

- give profiles of the users of the network
- provide info on the instrumentation & software it uses
- provide useful hints for those less accustomed to the hardware & software
  
- provide resources which may be useful in the classroom, so that the school who are helping us can actually use the info we/they are collecting
  
- provide info & images of the earthquakes we have recorded
  
- other things that users might suggest

so, thanks a lot, and happy hunting to all you earthquake hunters out there

cheers

Vic Dent
